01 STATISTICAL PARAMETERS

4 sections · 9 fragments

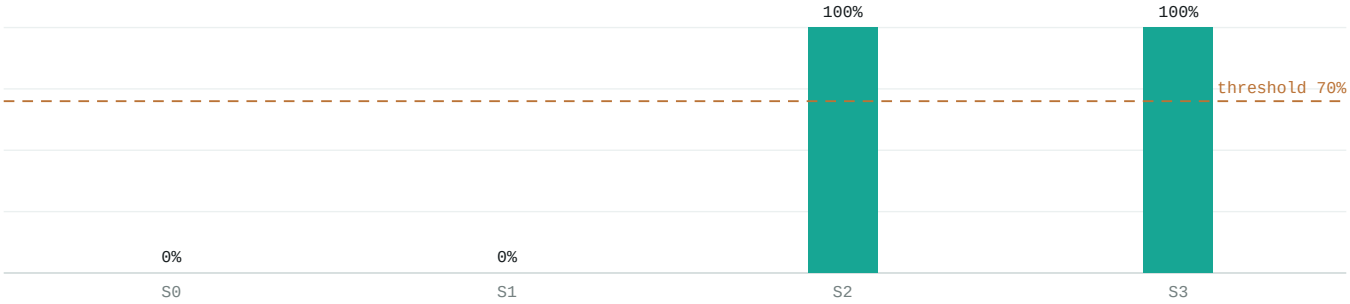
SECTIONS **4**	FRAGMENTS **9**	PASSED GATE **2**
ABSORBED **7**	BASELINE RESTATEMENTS **0**	GATE CUT **2.39**
RESILIENCE **0.55**	VORTEX SPIN **1.90**	PASS RATIO **22%**
MEAN ENERGY **1.29**	ENERGY SPREAD **1.29**	BASELINE ENERGY **1.29**
MEAN INTEGRITY **50%**	MEAN COHERENCE **0.65**	CONTIGS **2**
STRUCTURAL GAPS **2**	POINTER SWAPS **0**	RESTORED **0%**
CORE VERSION **v3**	CORE TENSION **0.24**	CORE LOBES **3**
CROSS-SECTION LINKS **6**	ANOMALIES **0**	INSIGHTS **5**

02 RECONSTRUCTION CHARTS

per-section, vector drawn

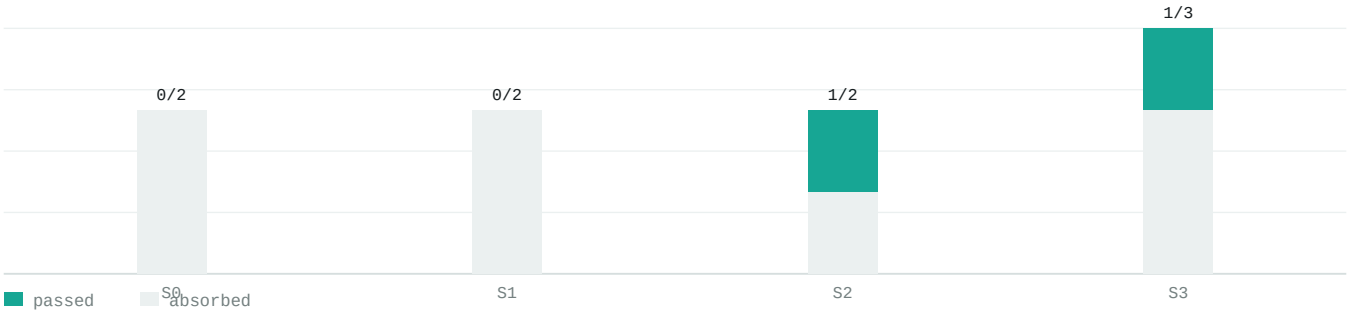
INTEGRITY PER SECTION

restored adjacency ÷ expected — dashed line marks the 70% routing threshold



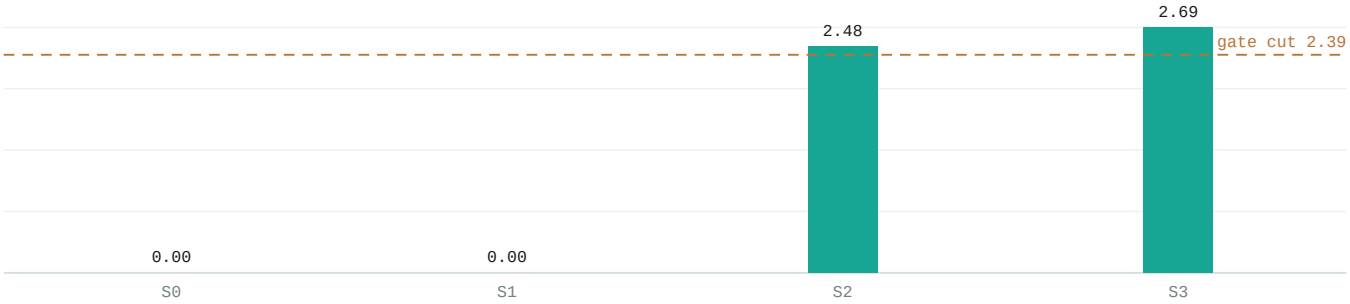
GATE OUTCOME PER SECTION

accent = carried into stitching · grey = absorbed by the energy gate



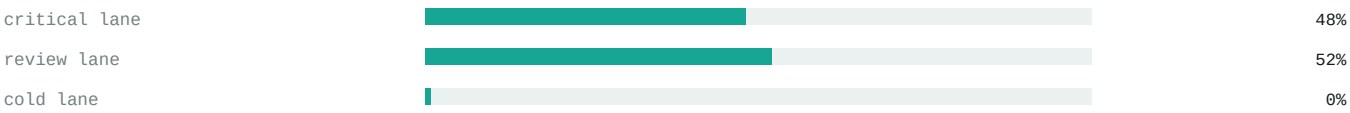
POST-VORTEX ENERGY PER SECTION

mean surviving energy against the gate cut



CORE AFFINITY

reweight · tension 0.24



03 SECTION LEDGER

4 streams

SEC	SECTION	FRAG	PASS	COH	INTEG	ROUTE
S0	1. Introduction	2	0	0.30	0%	cold
S1	2. Methods	2	0	0.70	0%	cold
S2	3. Results	2	1	0.85	100%	critical
S3	4. Discussion	3	1	0.74	100%	review

04 STRATEGIC ADAPTABILITY

5 signals

CROSS-SECTION · HIGH

1. Introduction !" 2. Methods

Strongest co-activation in the document (0.120) through energy, gate, fragments. Route these two streams into one processing lane so the shared vocabulary is not reconstructed twice.

STITCHING · HIGH

Weakest reconstruction: 1. Introduction

Integrity 0% with 0 broken adjacencies after 0 pointer swaps. Re-fragment this section at a finer grain, or hold it for a second pass — stitching it in one shot will invent continuity that is not there.

ENERGY-GATE · LOW

Cut at 2.39 absorbs 78% of fragments

7 of 9 fragments were filtered (0 as baseline restatement). The gate is selective: only dense, specific material reaches the reconstruction queue, so background execution stays cheap.

VORTEX · HIGH

Highest-density stream: 4. Discussion

Mean post-vortex energy 2.69 against a document baseline of 1.29. Give this stream the fast lane and its own reconstruction budget; the rest can share one.

FLEXIBLE-CORE · HIGH

Core reweights — 3 active regions

review lane holds 52% of core capacity across 1 section. Capacity is now review lane at 52%. Tension 0.236 means the load is concentrated: keep dedicated lanes per region rather than one shared queue.

06 CROSS-SECTIONAL LINKS

6 pairs

STRENGTH 0.120

1. Introduction !" 2. Methods

shared vocabulary: energy, gate, fragments

STRENGTH 0.098

3. Results !” 4. Discussion

shared vocabulary: runs, percent, gaps, sections

STRENGTH 0.049

1. Introduction !” 3. Results

shared vocabulary: absorbed, fragments

STRENGTH 0.049

1. Introduction !” 4. Discussion

shared vocabulary: engine, reconstruction

STRENGTH 0.037

2. Methods !” 4. Discussion

shared vocabulary: fragment

STRENGTH 0.030

2. Methods !” 3. Results

shared vocabulary: fragments
